Get Free Body Contouring And Liposuction 1st Edition

This unique book details advanced techniques in lipoplasty and autologous fat grafting for high-definition body sculpting. Clear step-by-step explanations of techniques are accompanied by numerous color illustrations and photographs. The first section includes chapters on surface and muscular anatomy, anesthesia, assessment, technologies for ultrasound-assisted lipoplasty, and postoperative care. High-definition sculpting of the male and female abdomen, trunk, back, chest, and upper and lower limbs is then described in detail, and clear instruction is provided on autologous fat grafting for contouring the buttocks, breasts, and pectoral areas. The book will provide a fascinating insight into the art and practice of high-definition body sculpting for all surgeons who perform lipoplasty and body contouring techniques. It will also serve as an ideal aid for all practitioners who are pursuing workshops and practical training in this exciting new area of aesthetic surgery.

Edited by leading authorities Bruce E. Katz and Neil S. Sadick, MD, *Body Contouring* is a brand-new volume in the *Procedures in Cosmetic Dermatology Series*. It showcases the hottest new body rejuvenation techniques and technologies, including laser lipolysis, focused ultrasound, mesotherapy, laser and light treatments, subcision for cellulite, and more. International contributions equip you to master the newest approaches from around the world. Succinctly written and lavishly illustrated, the book offers a wealth of pearls and pitfalls to help you refine your skills and avoid complications. A bonus DVD allows you to refine your skills by watching key techniques being performed by the authors. Shows you how to perform the hottest new techniques in body sculpting, including laser lipolysis, focused ultrasound, mesotherapy, laser and light treatments, subcision for cellulite, and more. Offers clinical pearls, pitfalls, and key points to help you get the best results for all procedures. Allows you to master the best and newest techniques and technologies from around the world, thanks to contributions from high-profile physicians with a wealth of international expertise. Includes a DVD that helps you learn key procedures by seeing them performed by the authors themselves.

The perception of an inadequate body shape is a cause of concern to many people, and new techniques for altering body shape are increasingly being developed and offered to patients. Of these, the removal and transfer of fat is fast growing in importance and availability. This practical guide offers a comprehensive overview of this rapidly-evolving field, and thorough coverage of the implementation of fat removal techniques, both invasive and non-invasive, in a cosmetic practice. It begins with an overview of basic fat anatomy and physiology as an important introduction to this topic. The distinction between the physiology and treatment of cellulite and fat is also discussed. The next section of the book covers invasive treatments of fat such as traditional liposuction, laser-assisted liposuction, fat transfer procedures and mesotherapy. The latter half of the book largely focuses on non-invasive treatments for fat, including radiofrequency, ultrasound, cooling and laser technologies for fat removal. Throughout, potential complications and pitfalls of the various treatments are discussed. Edited by Matthew Avram, with contributions from a group of clinical stars, this book will appeal to cosmetic dermatologists, plastic surgeons, aesthetic medical practitioners, and obstetricians/gynaecologists

The definitive full-color illustrated atlas of breast and body contouring surgical procedures Includes DVD with video clips Part of the McGraw-Hill Plastic Surgery Atlas series, *Body Contouring* is a full-color, step-by-step guide to learning how to perform both traditional and contemporary plastic surgery procedures relative to breast and body contouring. Two hundred medical illustrations and more than two hundred photographs – all in full color – offer unmatched coverage of the required surgical steps and actual results. A companion DVD features skill-building surgical video clips. For each procedure, you'll find a complete review of key topics, including: Introduction to the surgical approach Relevant anatomy Indications Markings Details of the procedure (incision and exposure) Postoperative care Pitfalls Tips Part I of *Body Contouring* addresses important clinical concerns such as the safety of

Get Free Body Contouring And Liposuction 1st Edition

surgical techniques, intraoperative positioning, psychological issues, and issues pertaining to massive weight loss and surgical wound care. Part II then reviews specific body contouring surgical procedures by body region, beginning with the upper extremity, and proceeding to the female breast, male chest (gynecomastia), abdomen, back, and lower extremity. Learn all aspects of body contouring surgery, step by step: Breast surgery: Reduction; Mastopexy; Augmentation; Lifting; Gynecomastia; Arm and thigh contouring with liposuction and excisional techniques; Abdominoplasty, upper and lower, with hernia repair techniques; Back contouring

Plastic surgery after massive weight loss is one of the fastest-growing areas in plastic surgery today. With the problem of obesity approaching epidemic proportions, an increasing number of patients who have had bariatric surgery are now turning to plastic surgeons for body contouring to remove excess skin remaining after massive weight loss. These procedures and the skillful surgeons who perform them are now in high demand. *Body Contouring after Massive Weight Loss* is the first major work on this important topic by one of the preeminent experts, Dr. Al Aly, and a group of outstanding contributors. This comprehensive book is filled with useful information to help plastic surgeons understand the special needs of the massive weight loss patient and to skillfully and safely plan and execute the operations necessary for contouring each body region. Each chapter is organized in a consistent format, with indications and contraindications, patient evaluation, planning, staging of procedures, operative technique, postoperative care, tips and tricks, and problems and complications. This beautiful, four-color semi-atlas provides clear, step-by-step instruction for performing body contouring procedures in each anatomic area. Comprehensive chapters are included on the range of contouring operations, including: belt lipectomy and lower body lift, central body lift, thigh lift, buttock lift and buttock augmentation, large volume liposuction and body contouring, brachioplasty, and upper body lift. Each procedure is liberally illustrated with medical art as well as numerous preoperative, intraoperative, and postoperative images to demonstrate the technical nuances of these operations and the possible results that can be achieved. To complement this book, 2 DVDs are included with operative video: one on upper body lift and one on belt lipectomy. For the plastic surgeon wishing to expand his or her practice into post-bariatric surgery, *Body Contouring After Massive Weight Loss* is a must. No other source provides so much sound, practical advice or such complete coverage.

Body contouring surgery is one of the most popular plastic surgery procedures worldwide, covering minor liposuction and body sculpting as well as abdominal contouring, thigh lift, and extensive body lift operations following massive weight loss. *A Comprehensive Approach to Body Contouring* is a major work on this important topic by two pre-eminent experts, Drs. Al Aly and Fabio Nahas, along with a group of outstanding international contributors. The book has evolved from an earlier best-selling book, *Body Contouring after Massive Weight Loss* authored by Dr Aly. This new book represents a revision of the original as well as significant expansion of its scope to encompass all body contouring procedures for patients of various body types. The addition of Dr. Nahas as an editor reflects the significant contributions to the art of body contouring from Brazil and other South American countries, and the book contains the insight of some of the true innovators from this part of the world. The first volume in this two-volume set focuses on body contouring for patients of all body types, while the second volume is devoted to body contouring after massive weight loss. Chapters are organized in a consistent format and the book is beautifully illustrated with over 1400 illustrations. Four DVDs are included with numerous operative videos documenting the procedures in the book.

Liposuction is the first cosmetic procedure to change beautification surgery from open extensive excision surgery into a more atraumatic closed one. It gave rise to the modern understanding of minimally scarring and minimally invasive surgery and changed the understanding and preferences of both patients and

Get Free Body Contouring And Liposuction 1st Edition

doctors. It also became the most common procedure in cosmetic surgery world-wide, practiced by an increased number of physicians from various specialties. The techniques of fat grafting, closely bound with liposuction, have found widespread application and fat stem cells seem to be changing the future of many areas in medicine. Turning the pages, the reader will find a lot of information about advances, tips and tricks, as well as important milestones in the development of the different methods available, such as classic, power, ultrasound, laser and radio-frequency assisted liposuction etc. Most useful anesthesia techniques are described and discussed, and guidelines have been established for medical indications. Special attention is paid to good patient selection, complications and risks.

The contributors to this book have spent time and effort presenting the cosmetic and plastic surgeon with information on the techniques and uses of liposuction for cosmetic and non-cosmetic surgery purposes. This constitutes the first book on cosmetic and non-cosmetic liposuction. It provides a how-to-do manual for all procedures of cosmetic and non-cosmetic liposuction and is abundantly illustrated. Although new technology helps improve results, it is experience, care, and skill of the cosmetic surgeon that is necessary to obtain optimal results that satisfy the patient.
