Abstract: This research proposes an automatic parking system (APS) with a good maneuver performance for vehicle. The proposed configuration of the APS includes sensors information fusion, position estimation, path planning, and tracking algorithm.

**Development Of Automatic Parking System**

Automatic parking is an autonomous car-maneuvering system that moves a vehicle from a traffic lane into a parking spot to perform parallel, perpendicular, or angle parking. The automatic parking system aims to enhance the comfort and safety of driving in constrained environments where much attention and experience is required to steer the car. The parking maneuver is achieved by means of coordinated control of the steering angle and speed which takes into account the actual situation in the envl

An automated parking management system is a technique for mechanically parking and retrieving vehicles in order to accommodate the increase in demand for safe and convenient parking, as the number of vehicles increase day by day.

**Automated Parking Management Systems Market to be worth US...**

An automated parking system is a mechanical system designed to minimize the area and/or volume required for parking cars. Like a multi-story parking garage, an APS provides parking for cars on multiple levels stacked vertically to maximize the number of parking spaces while minimizing land usage. The APS, however, utilizes a mechanical system to transport cars to and from parking spaces in order to eliminate much of the space wasted in a multi-story parking garage. While a multi-story parking ga
