Diversity Of Breadfruit Artocarpus Altilis

Diversity of Breadfruit (Artocarpus altilis, Moraceae) Seasonality: A

Resource for Year-Round Nutrition. Breadfruit, Artocarpus altilis

(Parkinson) Fosberg, is an important but underutilized staple crop

cultivated throughout Oceania and much of the wet tropics.

Indigenous peoples have selected and cultivated cultivars with

different fruiting seasons to effectively extend fruit production for

most of the year.

Diversity of Breadfruit ( Artocarpus altilis, Moraceae ...

Despite being introduced to the Caribbean over 227 years ago to

address issues of food insecurity, breadfruit ( Artocarpus altilis) has

remained underutilized, which has been linked to the limited

knowledge of the crop diversity and characterization in the region.

An increased understanding of breadfruit diversity can support

commercialization and better utilization by improving propagators'

and growers' selection of accessions or types that will meet

consumers and processors demand.
