Renowned for its holistic perspective and "see and do" approach, this full-color, pocket-sized handbook offers step-by-step guidance on every phase of the nursing assessment—for adults, children, and special populations. The focus is on what nurses need to know to assess clients: the health history, physical examination, normal and abnormal findings, nursing interventions, and nursing diagnoses. This edition presents a complete update of all content and references, and contains new chapters on mental status and assessing frail, elderly clients.

This book covers some of the most recent developments and application potentials in structural health assessment for non-experts in the subject. Among topics addressed are sensor types, platforms and data conditioning for practical applications, wireless collection of sensor data, sensor power needs and on-site energy harvesting, long-term monitoring of structures, uncertainty in collected data, and future directions in structural health assessment.

- Who should read this manual? - Health hazards during construction activities or processes - Occupational health problems in construction workers - Control measures and influencing factors for effective occupational health management - EU health legislation and health agencies

The Handbook of Infant, Toddler, and Preschool Mental Health Assessment brings together, for the first time, leading clinical researchers to provide empirically based recommendations for assessment of social-emotional and behavior problems and disorders in the earliest years. Each author presents state-of-the-art information on scientifically valid, developmentally based clinical assessments and makes recommendations based on the integration of developmental theory, empirical findings, and clinical experience. Though the field of mental health assessment in infants and young children lags behind work with older children and adults, recent scientific advances, including new measures and diagnostic approaches, have led to dramatic growth in the field. The editors of this exciting new work have assembled an extraordinary collection of chapters that thoroughly discuss the conceptualizations of dysfunction in infants and young children, current and new diagnostic criteria, and such specific disorders as sensory modulation dysfunction, sleep disorders, eating and feeding disorders, autistic spectrum disorders, anxiety disorders, posttraumatic stress disorder, and ADHD. Chapters further highlight the importance of incorporating contextual factors such as parent-child relationship functioning and cultural background into the assessment process to increase the validity of findings. Given the comprehensiveness of this groundbreaking volume in reviewing conceptual, methodological, and research advances on early identification, diagnosis, and clinical assessment of disorders in this young age group, it will be an ideal resource for teachers, researchers, and a wide variety clinicians including child psychologists, child psychiatrists, early intervention providers, early special educators, social workers, family physicians, and pediatricians.

The third edition of Jarvis's Health Assessment and Physical Examination is an ideal text for undergraduate nursing students new to health assessment and registered nurses wishing to further develop and refine their skills. Advanced health assessment skills are described and will be useful for Nurse Practitioner candidates. The textbook is colour-coded and easy to follow. Each chapter sets out the eight key elements of health assessment: structure and function, developmental considerations, social and cultural considerations, subjective data, objective data, promoting a healthy lifestyle, documentation and critical thinking and abnormal findings. Advanced concepts allow students to progress once they understand the basics. Edited by Helen Forbes and Elizabeth Watt, this comprehensive text has been adapted and updated by leading academics and expert clinicians across Australia and New Zealand. Comprehensive approaches to health assessment in nursing, incorporating anatomy, physiology and pathophysiology Detailed identification of relevant development, social and cultural considerations in the Australian and New Zealand context Increased focus on frameworks for health assessment Logical layout and colour coding to support learning An eBook included in all print purchases Additional resources on Evolve eBook on VitalSource Instructor resources: Test bank PPT slides Image collection Student and Instructor resources: Multiple choice review questions Weblinks Videos Increased content on screening for family violence and abuse and mental health assessment A suite of point of view videos demonstrating core health assessment techniques for some of the difficult skills and concepts related to health assessment examinations
