Learning Python Decorators

A decorator is a function that takes another function as an argument, does some actions, and then returns the argument based on the actions performed. Since functions are first-

class object in Python, they can be passed as arguments to another functions. Hence we can say that a decorator is a callable that accepts and returns a callable.

Python Decorators: A Complete Guide -  
GeeksforGeeks

What I like about Matt Harrison's e-book "Guide to: Learning Python Decorators" is that it is structured in the way that I think an introduction to decorators should be structured. It picks up the stick by the proper end. The first two-thirds of the Guide hardly talk about decorators at all.

easily with the @ symbol – sometimes referred to as the pie syntax. Let's see how we can apply it to the above example:

```
def my_decorator(func):  
    def wrapper():  
        print('Before function call')  
        func()  
        print('After function call')  
    return wrapper  
  
@my_decorator  
def say_where():  
    print('say_where() function')  
  
Output: >>>  
Before function call >>> say_where() function  
>>> After function call
```

functionality to an existing function with decorators. This is called metaprogramming. A function can take a function as argument (the function to be decorated) and return the same function with or without extension.

Python Decorators Introduction - Python  
Tutorial

Decorators are a callable entity in Python that allows us to make modifications to functions or classes. The decorator works in an abstract style to extend or completely replace the behavior of an object. By understanding how to create decorators, you

Examples

Prerequisites for learning decorators. In order to understand about decorators, we must first know a few basic things in Python. We must be comfortable with the fact that everything in Python (Yes! Even classes), are objects. Names that we define are simply identifiers bound to these objects.

Python Decorators: How to Use it and Why?  
Python's Decorator Syntax. Python makes

# Read Free Guide To Learning Python Decorators Python Guides

creating and using decorators a bit cleaner and nicer for the programmer through some syntactic sugar To decorate `get_text` we don't have to `get_text = p_decorator(get_text)` There is a neat shortcut for that, which is to mention the name of the decorating function before the function to be decorated. The name of the decorator should be prepended with an `@` symbol.

Best Way to Learn Python [Massive 2020 Step-by-Step Guide]

I bought Matt Harrison's book, *Guide To: Learning Python Decorators* this week to see if I could finally understand what the big deal was about decorators. I've decided to try reviewing this book using Doug Hellman's method of doing a Quick Review and then a more formal in depth review for those of you hardy enough to want to read more.
