Convergence of the life sciences with fields including physical, chemical, mathematical, computational, engineering, and social sciences is a key strategy to tackle complex challenges and achieve new and innovative solutions. However, institutions face a lack of guidance on how to establish effective programs, what challenges they are

Read Book Life Sciences March 2014

Cluster Paper

likely to encounter, and what strategies other organizations have used to address the issues that arise. This advice is needed to harness the excitement generated by the concept of convergence and channel it into the policies, structures, and networks that will enable it to realize its goals.

Convergence investigates examples of organizations that have established mechanisms to support convergent research. This report discusses details of current programs, how organizations have chosen to measure success, and what has worked and not worked in varied settings. The report summarizes the lessons learned and provides organizations with strategies to tackle practical needs and implementation challenges in areas such as infrastructure, student education and training, faculty advancement, and

inter-institutional partnerships.

This book constitutes the refereed proceedings of the 10th International Conference on Data Integration in the Life Sciences, DILS 2014, held in Lisbon, Portugal, in July 2014. The 9 revised full papers and the 5 short papers included in this volume were carefully reviewed and selected from 20 submissions. The papers cover a range of important topics such as data integration platforms and applications; biodiversity data management; ontologies and visualization; linked data and query processing.

The Handbook on Universities and Regional Development offers a comprehensive and up-to-date insight into how

Read Book Life Sciences March 2014

Cluster Paper

academic institutions spur their surroundings. The volume sheds light on universities as regional development actors from a historical perspective by introducing institutional changes and discussing the interrelatedness of society, business and academia. It provides detailed investigations on various knowledge transfer mechanisms to help understand the diverse ways through which ideas and intellectual property can flow between universities and businesses. Detailed case studies from three continents (Europe, Asia, and America) demonstrate the highly contextual nature of the interactions between academia, industry and government.

In *The Capacity to Innovate*, Sarah Giest provides insight into the collaborative and absorptive capacities needed to provide

Read Book Life Sciences March 2014

Cluster Paper

public support to local innovation through cluster organizations. The book offers a detailed view of the vertical, multi-level, and horizontal dynamics in clusters and cluster policy and addresses how they are managed and supported. Using the biotechnology field as an example, Giest highlights challenges in the collaborative efforts of public bodies, private companies, and research institutes to establish a successful ecosystem of innovation in this sector. The book argues that cluster policy in collaboration with cluster organizations should focus on absorptive and collaborative capacity elements missing in the cluster context in order to improve performance. Currently, governments operate at different levels – from the local to the supranational – in order to support clusters, and cluster policies are often pursued

Read Book Life Sciences March 2014

Cluster Paper

alongside other programs, leading to uncoordinated efforts and ineffective cluster strategies. The Capacity to Innovate advocates for a coordinated effort by government and cluster organizations to support capacity elements lacking within the specific cluster context.

One-size-fits-all cluster policies have been rightly criticized in the literature. One promising approach is to focus cluster policies on the specific needs of firms depending on the stage of development (emergence, growth, sustainment or decline) their cluster is in. In this highly insightful book, these stage-specific cluster policies are analysed and evaluated. Moreover, several chapters also focus on smart specialization policies to promote regional development by taking into

Cluster Paper

account the emergence and adaptation of clusters and industries.

?This volume is a collection of fresh and novel contributions to regional science. They commemorate the scientific inheritance of the founding father of regional science, the late Walter Isard. All papers are written by well-known scholars in the field and serve to highlight the great importance of regional science theory and methodology for a better understanding of current spatial and environmental problems throughout our planet. The book showcases a multidisciplinary panorama of modern regional science research and presents new insights by applying regional science approaches.

The 'New Frontiers in Cancer Therapies: Focus on Transcription Factors, GTPases, Phosphatases and GPCRs, 2018-2030' report provides a comprehensive study on the current market and therapeutic potential of the various pharmacological interventions designed against difficult-to-modulate cancer targets. It features an elaborate discussion on the future potential of this evolving domain, focusing on phosphatases, transcription factors, small GTPases (specifically Ras family) and undruggable G-protein coupled receptors (GPCRs). One of the key objectives of the study was to review and quantify the future opportunity for the ongoing product development programs of both small and big pharmaceutical firms. Amongst other elements, the report

Scholars and policymakers alike agree that innovation in the biosciences is key to future growth. The field continues to shift and expand, and it is certainly changing the way people live their lives in a variety of ways. With a large share of federal research dollars devoted to the biosciences, the field is just beginning to live up to its billing as a source of innovation, economic productivity and growth. Vast untapped potential to imagine and innovate exists in the biosciences given new tools now widely available. In *The Biologist's Imagination*, William Hoffman and Leo Furcht examine the history of innovation in the biosciences, tracing technological innovation from the late eighteenth century to the present and placing special emphasis on how and where technology

Read Book Life Sciences March 2014

Cluster Paper

evolves. Place is often key to innovation, from the early industrial age to the rise of the biotechnology industry in the second half of the twentieth century. The book uses the distinct history of bioinnovation to discuss current trends as they relate to medicine, agriculture, energy, industry, ecosystems, and climate. Fast-moving research fields like genomics, synthetic biology, stem cell research, neuroscience, bioautomation and bioprinting are accelerating these trends. Hoffman and Furcht argue that our system of bioscience innovation is itself in need of innovation. It needs to adapt to the massive changes brought about by converging technologies and the globalization of higher education, workforce skills, and entrepreneurship. The Biologist's Imagination is both a review of past models for bioscience
