Sony Dxc 950p Manual. 11/30/2018 0 Comments Patrick: I've been collecting some Sony SD cameras over the past month -- since I'm a sucker for what was once \$6000 (or \$15,000) professional equipment that now sells for \$100's on eBay. The shift to digital & HD has forced a lot of 10-year-old video gear to be sold at very attractive prices. Yes, they often have problems (and many of the parts are ...

The second volume of Operative Manual of Endoscopic Surgery covers some of the operative endoscopic procedures which have been introduced into clinical practice since the publication of Vol. 1. In the general section, we have included an updated chapter on instrumentation and new chapters on anaesthetic management of patients undergoing endoscopic surgery and on video image and recording. Both topics are of importance to the practice of endoscopic surgery and have not been adequately covered in the reported literature. Volume 2 deals with endoscopic procedures)nthechest and abdomen. There have been significant advances in thoracoscopic surgery during the past 2 years; particular reference is made to anatomical pulmonary resections and oesophageal resections. As far as the gastrointestinal tract is concerned, we have included gastric and allied operations but have not covered the colorectal region as we believe that more evaluation is needed before definitive accounts can be written on endoscopic colorectal resections, especially for cancer. For this reason, we have decided to defer this important topic to Vol. 3, which is in preparation. The same applies to laparoscopic repair of abdominal hernias. The same layout has been adopted as in Vol. 1 of the series, with heavy emphasis on illustrative representation of the operative steps and techniques. In the diagrams on sites of trocar/cannulae, we have indicated not only the site and size but also the functional role of each port.

The Operative Manual of Endoscopic Surgery, Volume 2 represents new procedures in endoscopic surgery. All these techniques have been clinically tested. The editors and the authors, pioneers and experts in the field of endoscopic surgery, have described these operative procedures clearly, giving a detailed step-by-step account of the operations, instruments needed and layout of equipment and staff. The text is illustrated by the most modern computer-designed drawings. In a completely new style these drawings give all necessary information concerning each individual operative step from both the endoscopic and conventional perspectives. This volume focuses upon advanced procedures such as thoracic oesophageal resection and procedures involving the gastro-intestinal tract, which were not covered in "Volume 1." The operative methods are presented in a stepwise, didactical manner, so that the book will serve as an excellent operative manual. Volume 3 will be published spring 1995.

This manual describes the Icing Research Tunnel (IRT) at the NASA Lewis Research Center and provides information for users who wish to conduct experiments in this facility. The capabilities of the tunnel test section, main drive system, speed control system, and spray bars are described. Tunnel performance maps of liquid water content as a function of median volume droplet size is presented for two types of spray nozzles at test-section velocities ranging from 86.8 to 303.9 kn (100 to 350 mph). The facility support systems, which include heated air systems, steam and service air systems, an altitude exhaust system, a force balance system, and the model electrical power system, are described. Also discussed are facility instrumentation capabilities for temperature and pressure measurements and model attitude simulation. In addition, photographic documentation and flow visualization techniques are explained, and pretest meeting formats and schedules are outlined. Tunnel-user responsibilities, personnel safety requirements, and types of test agreements are explained. The IRT is a closed-return atmospheric tunnel with a test section that is 6 ft high, 9 ft wide, and 20 ft long. It is equipped to support testing at airspeeds up to 303.9 kn (350 mph) with a 5.0-percent blockage model in the test section in a temperature and water-droplet environment that simulates natural icing conditions.
